## The Supply Demand Gap and Requirements

### Particulars

### Requirements

*Housing: Dwelling Unit provision for Households with standard provisions:*

- 1 Multipurpose Room
- 1 Bed Room
- 1 Kitchen
- 1 Toilet
- 1 W.C

*Physical Infrastructure Requirement:*

*Standard Infrastructure Provision for*

- Water Supply
- Drainage
- Roads

### Project Development Option

In-situ redevelopment and whole of the project will be addressed in the project

### Proposed Development

Based on preliminary understanding, the following components are being proposed

Housing Units [Single stored in situ].

- Standard Physical Infrastructure to be provided in the form of Circulation of Water Supply Drainage, Roads.

### Innovations proposed in Project Planning Background

Housing activities are known to have the capacity to play a significant role in social-economic development, because they help not only in creation of shelter for the people by also in generating employment opportunities for a large variety skilled and unskilled work force which is a prerequisite for growth and development of settlement. A considerable section of the people without land are in a still worse position as housing schemes for the poor have hitherto been targeted on paper but not applied in practice. Both the serviced land and shelter have become beyond the reach for half of the population-hence formation of slums, encroachments, informal colonies and unauthorized constructions. No land is

- Population projection
- Project horizon years
- Design period for various project components
- Per capita water supply
- Factors affecting consumption
- Existing water supplies
- Pipeline pressure requirement
- Economical size of conveying main
- Choice of pipe materials
- Peak factor

**Design of distribution system was carried out on the following basis:**

It is now proposed that water pipeline shall be provided in each household with requisite number of taps, as computed during the survey as felt needs shall be provided under this Project. However, considering that the houses are being provided with water, the provisions of multiple taps have not been encouraged and kept to the minimal level.

Presently accessibility to water supply facilities in the slum pocket is inadequate. The major source of water is from the common tap water available in the slums. The slum is partially connected to the municipal water supply main.

#### **Situation Appraisal & Key Intervention for Identified Slum**

- To ensure that housing, along with the supporting services is treated as a priority and at par with the infrastructure sector.
  - Forging strong partnerships between private, public, and cooperative sectors to enhance the capacity of the construction industry.
  - Organizing public consultations to meet the special needs of slum dwellers.
  - Promotion of livelihood for the slum dwellers.
- To overcome the existing situation and to promote planned development the following innovative strategies can be adopted for the improvement of the city:
- To ensure that housing, along with the supporting services is treated as a priority and at par with the infrastructure sector.
  - Forging strong partnerships between private, public, and cooperative sectors to enhance the capacity of the construction industry.
  - Organizing public consultations to meet the special needs of slum dwellers.
  - Promotion of livelihood for the slum dwellers.
- impact on overall development and prosperity of urban centres like Municipality.
- earmarked for Economically Weaker Sections and Low Income Groups in Master Plan. The population density norms are required to re-look to enable better utilization of valuable land, as certain areas in the city. This growing slum population and the lack of basic facilities like water and sanitation will badly

- Pipes are of Ductile Iron, Mild steel, GRP, HDPE, uPVC, Plastic etc.
- Gravity pipelines have to be laid below the hydraulic gradient.

Following design criteria are adopted for this project:

Water supply system broadly involves transmission of water from the water supply main to the area of consumption normally through pipelines. Pipelines normally follow the profile of the ground surface quite closely, normally at 1 metre below ground.

Tufanganj Municipality has water supply through OHR having water supply. For the proposed multi-storied buildings sump and pump with OHR is provided for each building. The water supply network for this slum will be connected to the citywide water supply network.

#### Transmission of Water

The details of water supply lines provide are as follow:

There is existing water supply scheme which has the capacity for meeting the requirement. Thus there is no additional requirement of any reservoir. There are street stand posts for the slum proposed. But to achieve house connection at slum 100 mm dia. DI pipes are proposed.

(Domestic Requirement) + 15% (head loss) + 100\*(p<sup>0.5</sup>) = 163.25 lpcd (approx).

According to the above, the water supply design requirement for Municipality has been fixed at 135 lpcd

#### Proposed Interventions

The pipelines needs to be regularly and kept in full working conditions. It is proposed that operation and maintenance of these pipelines and other assets be done in conjunction with the maintenance programme of the Municipal Corporation. The Bustee Working Committee shall be the first level of responsibility for ensuring that the pipelines etc are kept in good order. The overall operation and maintenance shall be carried out by the project cell of the Municipal Corporation.

#### Service Plan

Water supply projects are designed normally to meet the requirements over a period of 30 years after their completion. The time lag between design and completion of the project should also be taken into account which should not exceed two to five years depending on the size of the project. CPHEEO guidelines have been followed has suggested the design period for various water supply components.

#### Design Period for various Project Components

- Residual pressure
- Hydraulic zoning

Though there are storm water drains on the main road around the slums, but there is no systematic connection with the internal areas of the slum, thereby leading to acute water logging within the slum. It is worth mentioning that apart from lack of drainage network in several slum pockets, major challenge lies with its maintenance. In numerous cases drains in slums gets choked due to improper disposing of solid

concern. There is hardly any pucca drain. The state of drain also affects the condition of the road. As mentioned above poor drainage system and consequently chronic water logging are the major issues of

turn affected the environment and health of the people on an overall basis.

One of the priority area identified for Wood Industries slum has been absence of adequate drainage. Most of the drainage is kutcha and inadequate for covering the slums which had led to water logging which in

#### Assessment Overall State of Infrastructure

promotion and safeguarding the public health and environmental pollution.

The proposed drainage system by means of construction of new drains and improvement of existing will help to provide relief to the slum dwellers by means of efficient and effective disposal of storm water through the outfall channels. The outcome of this scheme will by and large enhance the quality of civic life by way of

#### Outcome

In the slums there is no proper drainage system and hence stagnation of water is a common occurrence for the slums. In order to improve the situation, there is a need for constructing pucca drains, which will dispose of the stagnant water to the main drains.

The status of adequate Drainage has a close and direct link with environment, water supply and its cleanliness, health and hygiene. The problem of adequate drainage associated with steep influx of population in urban areas, therefore needs to be addressed forth with, debated and deliberated at length, by the policy planners for the development of urban/city areas. Inadequate Drainage results in accumulation of stagnant water and is a major health hazard for the people living in the region.

#### Proposal

##### Drainage and Solid waste management

- The design of water supply conduits is dependent on pipe friction, available head, velocity allowable, etc.
- There are a number of formulae available for use in calculating the velocity of flow. However,
- Hazen William's formula for pressure conduits and Manning's formula for free flow conduits are popularly used.

**Proposed status and strategy**  
The existing condition of the road is poor and cause great hardship to the slum dwellers particularly women and children. The existing roads in the slum areas are predominantly made of brick pavement. These roads are substantially worn out. The lane roads are Kutchha roads. These roads are highly vulnerable and are in a poor condition particularly in rainy season

where the network is inadequate. required either to be up-graded or winded and new roads are also be constructed in a number of places economic and commercial activities of the slum, existing road network system in several places are present and ever increasing needs. In order to bear the additional pressure due to enhanced civic, development. The existing road network system of the slum has become inadequate to cope up with the due to several reason. Provision of basic quality road is thus an important element of slum drainage makes life even worse during monsoon season. Road are rarely re-built or re-paired periodically particularly those who require urgent medical attention. Lack of maintenance, coupled with poor difficult for all slum dwellers, especially, women and children. It also hampers prompt movement of sick; development of the slums. Poor road condition and absence of road facility in several slums makes life Roads in the slum are highly undeveloped and ill maintained. Poor roads are strong barrier to the improve access to health, education, and other social services.

A key component of the Proposal is a focused initiative to provide strong connectivity and provision of movement in the slums. This will enable the poor people to benefit from greater mobility and would increase their employment opportunities, open up trading and marketing of products, and important

### Proposal

#### Road Infrastructure

It is thus proposed to have an integrated drainage programme covering the slum pocket. The programme shall envisage construction of pucca drain throughout the road length and installing a maintenance programme to ensure that the drains are kept free from clogging from plastics and other materials. Depending on the availability of space and requirement, a sections have been designed, Designs of which have been provided in the relevant sections.

#### Proposed Interventions

has blocked the natural drainage courses, which in turn causes water logging and stagnation in different parts of the slum. Situation gets beyond control particularly during monsoon season like July and August. Accumulated water causes to generate public health problems. Haphazard growth and settlement in the slum area waste and other hazardous materials into the existing drains.

maintain.

One of the major issues is absence of proper maintenance. In view of this it is proposed that the entire road network is to be converted to concrete pavement as concrete pavements are durable and easy to maintain.

The Road needs to be maintained. It is proposed that operation and maintenance and servicing of these roads be done by the Bustee Working Committee shall be the first level of responsibility for ensuring that the pipelines etc. are kept in good order. The project cell of the Municipal Corporation shall carry out the overall operation and maintenance.

#### Proposed Intervention

All the proposed roads are rigid pavement-cement concrete roads. Rigid pavements are those which possess note worthy flexural strength. The concrete pavement slab can very well serve as a wearing surface as well as effective base course. Therefore usually rigid pavement structure consists of a cement concrete slab, below which a granular base or sub base course may be provided. Rigid pavements are generally designed and the stresses are analyzed using elastic theory, assuming pavement as an elastic plate resting over elastic or a viscous foundation.

#### Outcome

pavement.

After successful implementation of the scheme the slum dwellers will have facilities like pre-school education, adult education, non-formal education and social, recreational activities in the slum area. The community centres would provide the people to gather in, to meet and discuss their problems. It is not just a physical location but a space; where poor people could own, develop their thoughts and also could contribute their own skill and labour to make their dream come true. It will also provide the Municipal Corporation in networking with the urban poor communities in order to exchange information and views.

#### Definition of Slum for Housing:

Different definitions of a slum exist in different statutes and in urban poverty literature. For the purpose of HOUSING SCHEME, it is proposed to adopt the definition given in the 2001 Census, which is as follows:

a. All areas notified as 'Slum' by State/Local Government and UT Administration under any Act;

b. All areas recognized as 'Slum' by State/Local Government and UT Administration, which have

not been formally notified as slum under any Act;

'Slum' or 'Slum Area' – is a compact settlement of at least 20 households ( For NE & Special Category

attitudes.

The buildings are proposed to cover an area of approximate 32.18 Sq.mt along with provision of 2 rooms, kitchen and sanitation facility. The layout, size and type design of housing dwelling units depends on the local conditions and the preferences of the beneficiary. The houses, has been designed in accordance with the desire of the beneficiaries, keeping in view the climatic conditions and the need to provide ample space, kitchen, ventilation, sanitary facilities, etc. and the community perceptions, preferences and cultural

**Summary of Investment**

**Project Costing**

The costing for the individual sectors has been made on the basis of applicable Schedule of Rates. The details of each of the sub-projects have been provided in the respective sections.

**The cost components include:**

Infrastructure: Cost of infrastructure development/up-gradation including water supply, storm water drainage, roads (BT & CC) & drainage, etc.

Housing: Construction Costs would need to be arrived from the various components that are proposed to be implemented and would vary depending on the development option identified.

**GOI Contribution:**

PMAY scheme guidelines stipulate that, 1.5 lakhs of the unit cost of Dwelling unit.

The Central share would be available as per milestones set out in Memorandum of Agreement (MoA).

**Beneficiary Contribution:**

In order to ensure beneficiaries interest, financial contribution by the beneficiaries is critical. The share of beneficiary contribution in housing is proposed to be a minimum of 25000/-. As per PMAY guidelines no contribution from the beneficiaries is expected in infrastructure improvements.

**State Contribution:**

The decision would be left to the remaining share would have to be arranged by the State. State will contribute 5% of total Dwelling cost for infrastructure.

**ULB Contribution:**

ULB have no contribution on dwelling unit cost. ULB will contribute 5% of total Dwelling cost for infrastructure.

In the 1st Meeting of SLSMC of West Bengal it has been decided that the following funding pattern should be adopted for implementation of PMAY until further revision.

Type of City/Towns as per 2011 census	Component	Centre Rs.(Lakhs)	State Rs.(Lakhs)	ULB Rs.(Lakhs)	Beneficiaries Rs.(Lakhs)
Construction Beneficiary LED	Housing	1.5	1.92858	Nil	0.25
	Infrastructure	Nil	5%	5%	Nil
Contribution of					

**Project Cost and Financing Strategy**

**For Dwelling Unit**

Total no of Dwelling unit = 478 Nos

Rate per Dwelling unit = 3.68 Lakhs

Total Cost of Dwelling unit =  $478 \times 3.68 = 1759.04$  Lakhs

Central Share =  $478 \times 1.5$  Lakhs = 717.00 Lakhs

State Share =  $592 \times 1.93$  Lakhs = 1010.49 Lakhs

Beneficiary Share =  $478 \times 0.25$  Lakhs = 119.50 Lakhs

ULB Share = NIL

**For Infrastructure**

10 % of total Dwelling unit cost =  $2178.56$  Lakhs  $\times 10\% = 175.90$  Lakhs

Central Share = NIL

State Share =  $50\% \times 175.90$  Lakhs = 87.95 Lakhs

Beneficiary Share = NIL

ULB Share =  $50\% \times 175.90$  Lakhs = 87.95 Lakhs

The total project cost will be 1934 94 Lakh

Out of these Rs 1934.94 lakh Rs 175.90 lakh is the cost of Housing Infrastructure. The following table shows the share of cost between housing infrastructure & Physical Infrastructure.

## Institutional Capacity

Municipality Municipal Corporation, with its elected local body in place, has developed institutional strength to implement, operate & maintain proposed infrastructure. The Municipality spreading over an area of 12.95 square kilometres is comprised of 25 wards. With efficient and trained manpower, the Municipality has developed both technical and administrative skills. The development of appropriate municipal organizational structures with qualified staff is essential if municipalities are to provide cost effective services to citizens. With local government reform municipalities are required to take on new tasks, and provide new services. This will only be possible if municipalities have cost-effective and appropriate structures and staff that are well qualified and highly motivated. The municipalities should plan in such a way so as to ensure that they can meet the needs of citizens effectively and efficiently.

PMAY (Housing for All): Tufanganj Municipality

MED, GOWB

The Municipal Corporation is entrusted with the responsibilities of providing the following civic services and infrastructural facilities to the citizens:

- Solid Waste Management
- Birth and Death Registration
- Crematoria and burial ground
- Prevention of food adulteration
- Preventive Health Care and Health Care Services
- Roads and its development
- Widening & improvement to roads
- Street Lighting
- Bus Stands, Public Urinals
- Town Planning
- Slum Improvement and Urban Community
- Education
- Water
- Beautification
- Auditoriums
- Markets
- Storm Water Drainage
